DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 15 use improper Markush language, Markush groups should recite – one or more members selected from the group consisting of – followed by the members of the group.

Claim 20 states that the nuclear material may contain oxides or halides of actinides, and/or transuranics, and/or hydrocarbons and /or acids contaminated with actinides. It is unclear which of the components of the nuclear material must be an oxide or a halide.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-10, 15-16, 19, 20-22, and 24-27 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Wagh '815.

As stated above the process of Wagh does not expressly teach the step of adding sufficient MgO to convert fluorides present to MgF_2 , or the step of adding alumina in an amount suffice to absorb substantially all hydrocarbon liquid present. However, it appears that the claims 1, 15, and 20 do not require fluorides or hydrocarbons. Therefore, Wagh anticipates claims 1, 15, and 20 by adding zero MgO to convert fluorides present, and adding zero alumina sufficient to absorb substantially all the hydrocarbon liquid present, or it would have been obvious to add zero MgO and zero alumina given the lack of fluorides and hydrocarbons.

Response to Arguments

Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.
